To use the chart, you need to know the mother's age at the time of conception and the month of conception. The chart then uses this information to predict the baby's gender. For example, if the mother is 25 years old and conceives in January, the chart may predict that the baby will be a boy. While the chart may seem complicated, it is relatively easy to use once you understand the basics. Some researchers argue that the chart is based on scientific principles, such as the timing of conception and the mother's. So, does the Chinese Gender Prediction chart really work? The answer is not a simple yes or no. While some studies have reported a high success rate for the chart, others have found that it is no more accurate than chance. It is also worth noting that the chart is not based on scientific evidence and has not been proven to be effective through rigorous testing. In fact, many experts consider the chart to be a form of entertainment rather than a reliable method of predicting a baby's gender. In conclusion,
